*Engineered EBM
Access Systems*

What is an OPOS* ?

An OPOS establishes safe window cleaning and exterior maintenance procedures for California buildings and structures.

In most cases, a brief site visit is all that is required to determine if your building requires an OPOS. We work with Architects, Contractors, Owners, Facility Managers and Building Contractors in complying with the all applicable Cal-OSHA EBM Regulations.

Why use a Consultant?

We do not sell permanent equipment, and have no obligations to any manufacturer. This allows us the flexibility to recommend the safest, most cost effective equipment that is available for your building. Our goal is to bring your building into compliance in the most practical and cost-effective manner possible.

We will gather all relevant data, including; building height, year of construction, existing provisions for window cleaning & fall protection to determine the best course of action. We are qualified to provide you, as our clients with a single source unbiased solution for your Exterior Building Maintenance needs.
